Lund University and Secure Logistics compete for “World’s Best Technology” Title

Package Security Technology Grabs Attention at the 2009 WBTshowcase

March 16, 2009, Arlington, Texas, US –Lund University in Sweden with its spin-off company Secure Logistics was selected among the top technologies from around the world to present at the March 24-25 WBTshowcase in Arlington, Texas, in order to attract licensees, partners and investors.

Secure Logistics’ patented intrusion detection technology TamperSeal™, which reduces thefts, counterfeits, terrorism, and smuggling of goods in transportation, warehouses and shops, was rigorously screened and mentored by WBTshowcase commercialization experts to present to an expected audience of 450 including over 100 bonafide investors and Fortune 1000 licensees.

“The revolutionary nature of the technologies presenting at the WBTshowcase makes it a must-attend event for investors and licensing scouts,” said Paul Huleatt, WBTshowcase CEO.

The WBTshowcase is the premier event showcasing the largest collection of undiscovered technologies emanating from the world’s leading universities, labs and research institutions. Each year, just one of the WBTshowcase’s carefully selected presenters receives the “Best of Show” award.

“Our platform technology protects secret documents, prototypes, athletes’ doping tests, and theft prone consumer products, as well as authenticates and protects pharmaceuticals. This is done more secure and cost effective than competing technologies and our solutions fit all transport packages from small envelopes to sea containers,” said Sten Wandel, professor at Lund University and CEO of Secure Logistics.

Mr. Huleatt highlighted that the companies groomed to present at the WBTshowcase leave with new knowledge and contact to take their technologies to market and beyond. Approximately 1/3 of past WBTshowcase presenters have gone on to secure venture capital or a licensing/strategic partnering agreement with a Fortune 500 company. To date, past presenters have raised over \$400 million in first (or next) round venture capital.

ABOUT Secure Logistics www.seclog.com

Secure Logistics develops and licenses intrusion alarms where both the goods and the alarm detector are sealed with a barrier and set under modified atmosphere as vacuum. Any intrusion or tampering causes a change in the atmosphere, which is immediately and automatically detected, memorized and if desired transmitted via e.g. a RFID, WiFi or mobile phone network. TamperSeal™ based solutions can solve almost all logistics security needs. Secure Logistics is a spin-off from Lund University, the largest research university in the Nordic Countries. www.lu.se

ABOUT WBTshowcase www.wbtshowcase.com

The WBTshowcase is the nation's premier event showcasing the largest collection of undiscovered technologies emanating from the world’s leading universities, labs and research institutions.
